Subject: Deschutes Update

Good Morning and Greetings!

I had a nice conversation with Lydia regarding Deschutes activities. I wanted to share a few highlights with you.

- The Budd Inlet model will have the same model grid size as the South Sound model (wanted to bring this to Ben's attention)
- Mindy Roberts has shared with Lydia that sources to the north (she mentioned Redmond) may be influencing DO in South Sound (also for Ben's attention). The spatial scope of the Phase 2 TMDL may be larger than previously thought. Mindy will present her preliminary findings at the July watershed group meeting.
- Timeline. Modeling scenarios are scheduled to be completed by October 2017. TMDL submittal by June 2019.
- Invertebrate data – Claire pointed me to these data (link below). Data collection is ongoing.

Thanks again!

Chris
